Education

BSE **University of Pennsylvania** *Computer Science and Mathematics, GPA: 3.43/4.0* May 2028

- Coursework: Machine Learning, Algorithms, Data Structures, Big Data Analytics, Human-Computer Interaction, Advanced Python Programming, Probability, Advanced Linear Algebra (in progress)
- Societies: Wharton Investment & Trading Group, Penn Poker Club, Penn Math Society, SIF

Experience

IBM, *Associate Developer Intern — AWS Cloud Full Stack (Incoming)* May 2026 – Aug 2026

- Incoming Summer 2026 intern on an AWS cloud full-stack team.

Nayya, *Data Analytics/Data Science Intern* New York City, NY April 2025 – Aug 2025

- Engineered scalable SQL + Python pipelines processing 100M+ pharmacy/medical claims with Athena, PostgreSQL, dbt; uncovered cost drivers and formulary misalignments, supporting pricing strategy.
- Automated anomaly detection across millions of rows (outliers, duplicates) with Pandas/NumPy, integrating results into regulatory royalty reporting flows; validated with actuaries to ensure financial accuracy.
- Delivered interactive Sigma dashboards with trend forecasting and variance analysis, enabling executives to make data-driven product and pricing decisions.

Aristotle — Your AI SDR, *Software Engineer Intern* (backend + AI integrations on AWS) Remote Jun 2023 – Sep 2023

- Prototyped generative-adversarial persona models and deployed AI-driven backend services (TypeScript, Python, AWS) for automated sales enablement.
- Integrated NLP-based API features to improve lead targeting and response personalization.

New Jersey Institute of Technology (HSSRI), *Student Research Intern* Newark, NJ Jun 2023 – Aug 2023

- Conducted computational modeling of visual perception systems using TensorFlow, sk-learn, and PsychoPy.

Projects

Sports Event Trading Platform eventedgehq.com

- Built and deployed a multi-user automated trading platform for Kalshi prediction markets; ingests live odds from multiple sources, detects real-time mispricings, and executes authenticated trades across 7 sports.
- Designed a full-stack SaaS system with FastAPI, Next.js, PostgreSQL, Stripe billing, JWT auth, admin tooling, public trade feeds, and a secure self-hosted execution mode for high-volume users.
- Engineered parallel order execution for 20+ concurrent users with Kelly sizing, pro-rata liquidity allocation, resting order cancellation, and layered risk controls including staleness guards, shock filters, and cross-source validation.

ML-Based Stock Price Prediction Repo

- Built an end-to-end time-series ML pipeline on Yahoo Finance equity data (AAPL and arbitrary tickers) using engineered technical indicators (SMA, EMA, RSI, rolling volatility, momentum) to predict next-day closing prices.
- Trained and compared Linear Regression, Random Forest, and SVR models using MAE/MSE/R2, tuning hyperparameters and shipping an interactive Jupyter demo where users choose tickers/date ranges and visualize historical versus predicted prices.

PokerBot Repo

- Developed a reinforcement learning agent (call/raise/fold) using Keras and NumPy; implemented reward shaping to improve strategy convergence. Trained over 10,000 simulated hands to optimize decision-making under uncertainty.
- Implemented a Q-learning neural network with epsilon-greedy exploration and a strategic reward function for expected value.

Honors & Skills

- 36/36 ACT, National Merit Finalist; 2x ACSL Finalist; 3x AIME Qualifier (AMC12: 126, AIME: 8); USACO Plat; 2300 chess.com (99th percentile)
- *Programming:* Python (Pandas, NumPy, TensorFlow, scikit-learn), Java, C++, SQL, TypeScript/JavaScript, React, HTML/CSS, Git, Linux, Docker
- *Data/ML:* statistical modeling, predictive analytics, reinforcement learning, natural language processing, time-series forecasting, optimization, stochastic processes, Monte Carlo methods, large-scale data processing, data viz, derivatives pricing, portfolio optimization, risk management
- *Platforms/Tools:* Athena, PostgreSQL, dbt, Sigma, AWS (Lambda, S3, EC2), Jupyter, GitHub
